OBJECTIVE

Analytical-thinking Data Analyst, I am eager to bridge the gap between business stakeholders' needs and technical solutions. Due to my demonstrated problem-solving skills and firm background in technical solutions, I can effectively support the business in identifying their – sometimes yet undetected – needs and issues, then “translate them” into the language of the developing team, thus finding the most adequate solutions.

Finding a reasonable career opportunity where I can put my training and skills to good use while contributing to the company's success.

RELEVANT SKILLS

Power BI

SQL SERVER

Tableau

MS Excel

Python

PERSONAL PROJECTS

Mega Mart

- Dashboard showing sales and revenue of a retail company in different states which is useful in decision making for the business growth.
- Visualized data in Power BI, transformation of data using **Power query (ETL)**, built relationships and did **DAX** analysis.
- GitHub link: <https://github.com/ishikashrma/Mega-Mart>

Hotels

- Dashboard showing revenue generated by hotels in different countries for the given time frame.
- Visualized data in Power BI, analysed & retrieve data with SQL Server.
- GitHub link: <https://github.com/ishikashrma/Hotels>

COVID -19

- Dashboard showing national/international COVID-19 confirmed & recovered cases, forecast trend line, highest death rates in different countries/ states.
- Visualized data in Tableau.
- GitHub link: https://github.com/ishikashrma/Covid-19_trend

Space Mission

- Tableau Dashboard showing missions status of different space agencies and climatic conditions at the time of launch.
- GitHub link: https://github.com/ishikashrma/Space_mission

Ecommerce Sales

- Designed a sales dashboard using Excel that analyses the sales based on various product categories. Added user control for product category so that users can select a category and can see the trend month-wise and product-wise accordingly.
- GitHub link: https://github.com/ishikashrma/ecommerce_excel
